

## **Enviro Tank Warrantee Rules**

**You will void your warrantee and ruin your Enviro tank by not adhering to the following rules:**

- 1) Do not pour grease or oils down the drain. This will block your filters and dripper lines and prevent the aerobic bacteria from 'breathing'.
- 2) Do not use your waste disposal unit to grind up bones, coffee grinds, tea bags, or any other non biodegradable foodstuffs. They will not biodegrade in the system, and will eventually clog it up.
- 3) Do not pour paints, paint thinners or and petroleum products down the drain. This will kill the bacteria and 'melt' the polyethylene liners of the Biofilters.
- 4) Do not pour automobile fluids, such as petrol, diesel, oil, transmission oil, brake fluid, grease or anti freeze down the drain. They will destroy the beneficial bacteria and 'melt' the polyethylene liners of the Biofilters.
- 5) Do not use drain cleaners. They will destroy the beneficial bacteria and 'melt' the polyethylene liners of the Biofilters.
- 6) Do not pour weed killers, pesticides, or herbicides down the drain. They will kill the beneficial bacteria of the biomass.
- 7) Do not flush cigarette butts, disposable nappies, feminine hygiene products or any other non biodegradable items down the toilet. They will clog the filters, and render the system inoperable
- 8) Do not allow large quantities of water to enter the system over short periods of time. This will flood the tank, dilute the biomass and overload the dripper system.
- 9) Do not allow the tank to empty out without insuring that there is an overflow drain away from the hole that the tank is sitting in (see installation details). Failure to do this could cause the tank to float; this in turn could damage entry pipes and cables.
